, also known as Sugar Loaf and Caveman, is an action-adventure game released for Apple's iOS. The game is set on a small island and it sees the player running, jumping, sliding, climbing and swinging with the aim of surviving until the end. Set in an immersive 3D world, it features game play elements that includes picking up things, jumping on and off platforms and caves, as well as allowing the player to run upside down or forward, and cause the platform to change orientation and affect the scenery. It was initially developed by indie developer Derek Yu and released on April 4, 2011, as his first commercial game. Spelunky was released on Android operating system in November 2013. Spelunky received critical acclaim for its difficulty, innovation, and gameplay, though praise was also given to its visual and narrative aspects. Similar to many platforming games, Spelunky uses tense platforming sections in which the player must make a careful choice to move on or risk being crushed by the falling rocks. Criticism was given to its tendency to crash on weaker iOS and Android devices, as well as being unable to support save states and auto-save as a result. On release, Spelunky sold one million copies worldwide and was named Apple's Game of the Year for 2011. Gameplay Overview Spelunky is a platform game where the player controls a caveman, given the name 'Sugar' by the Kaptin, who is working to save the dinosaurs from becoming extinct. The game is set in the fictional ruin of Spelunky Island, the landing site of a crashed spaceship. With the survival of Sucker, the ship's crew, and dinosaurs at stake, Sugar must explore the ruined islands in search of a key hidden among the ruins, known as the Stone of Dreams, from a an ancient tribe who are working on a new plan to revive the dinosaurs. The player is able to run, jump and slide throughout the game. Spelunky also features tight game play environments where the player must collect all of the food items hidden around the game so they can avoid starvation, but not too difficult to make these items hard to find. The game contains 153 items hidden throughout the island and the player must collect all of them to open the gate located in the ancient manor, revealing the way to the Stone of Dreams. The player must survive by collecting,

trading, and using the items they find. Failure to complete each level results in the player dying and losing
